iTouchiLearn Feelings

#1. Purpose/Function

It teaches children the social cues needed to identify and express their emotions. By interacting with words and visual cues, children review the process of what causes an emotion.

#2. Features

- Funny animations that demonstrate cause and effect feelings and emotions
- 6 fun activities that identify core feelings and improve communication skills
- Audio directions to facilitate learning and aid children with speech difficulties

#3. Accessibility

- Available on iPods, iPhones, and iPads
- Cost: There is a free version and a version for \$1.99

#4. Who is it for?

This app is intended for preschool, kindergarten, and children with special needs to provide them with multiple tools to learn about and express emotions.

#5. Inside the Classroom

Students can use the app to express how they are feeling. In addition, this app can be incorporated into a whole-class activity. The app is also cheap enough that the school could purchase it and have it available on any devices. Unfortunately, this does mean that the school would have to have access to iPods or iPads.

#6. At home

The app is easy to apply into daily learning, especially at home. It is recommended that children work with parents when first using the app. As they maneuver through the activities and information, they will get the hang of it and be able to explore it freely.
